Special Issue: New scientific advances from the CARG project

(Italian official geological and geothematic mapping project)

Editors: Gino Romagnoli (ISPRA Rome), Marco Nocentini (ISPRA Rome), Federica Fogliani (ISMAR-CNR Bologna), Luisa Sabato (University of Bari), Diego Pieruccioni (ISPRA Rome), Stefano Zanchetta (University of Milano-Bicocca)

The recent relaunch of the CARG Project, the official Italian project of geological and geothematic cartography, has fueled the collection of new field data for the advancement of geosciences.

For this special issue we are looking for contributions that, starting from the data collected during the CARG Project in the Alps-Appennines system and in the neighboring regions, allow new steps forward in various fields of Earth Sciences, such as stratigraphy, sedimentology, paleontology, structural geology, volcanology, petrology, metamorphic geology, geomorphology and tectonics. Both guides and maps aimed at summarizing or exploring in more detail specific scientific topics that emerged during the project are welcome.

Deadline for submission: February 2026

About the journal

Geological Field Trips and Maps is the online international journal on field geology of the Italian Geological Society and the Geological Survey of Italy (IF 2023: 1.2)

It publishes high-quality **original geological and thematic maps** with short notes, and **geological guides** relating to field excursions

Open access and without publication fees paid by the authors

International editorial board of experts in cartography and field geology from various universities and national geological surveys

The standard issues of the journal welcome contributions from areas of high geological interest from all over the world, and on the technical aspects and innovative applications of geological and geothematic cartography
